PROJECTS

Hospital Management System, *The Hospital Management System is a Java-based console application that efficiently manages patient and doctor records along with appointment scheduling. Integrated with a MySQL database, it offers functionalities such as patient addition, viewing patient and doctor lists, and appointment booking. The system emphasizes simplicity and database connectivity to enhance hospital administration.*

Key Features:

Patient and doctor management.

Appointment booking with availability checks.

MySQL database integration using JDBC.

Simple console-based interface.

E-commerce Food Page Application with angular

Experienced Angular Developer with expertise in full-stack development and e-commerce solutions.

Proficient in creating dynamic web applications and connecting frontend with backend services. Skilled in user authentication, data management, and deployment. Solid understanding of the development tools, including Angular CLI. Proven ability to integrate third-party services like PayPal and implement features such as maps using Leaflet. Strong problem-solving skills and commitment to delivering high-quality solutions. Experienced in MongoDB Atlas, user registration, and creating secure APIs. Adept at deployment on platforms like Heroku. Seeking opportunities to contribute technical skills to innovative projects.
